

COP 1, known as the Berlin Mandate, was pivotal as it acknowledged the inadequacy of existing national emission targets. The conference laid the groundwork for stronger, legally binding commitments under the Kyoto Protocol, focusing on developed nations and setting the stage for differentiated responsibilities in global climate action.

COP 1 – Berlin, Germany (1995)

COP 1, known as the Berlin Mandate, was pivotal as it acknowledged the inadequacy of existing national emission targets. The conference laid the groundwork for stronger, legally binding commitments under the Kyoto Protocol, focusing on developed nations and setting the stage for differentiated responsibilities in global climate action.

COP 3 – Kyoto, Japan (1997)

The Kyoto Protocol was adopted during COP3, introducing the first legally binding emission reduction obligations for developed countries. This marked a significant advancement in international climate efforts by setting quantifiable targets for greenhouse gases, which were instrumental in structuring subsequent climate negotiations.

COP4 – Buenos Aires, Argentina (1998)

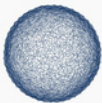

COP 4 built on the momentum from Kyoto by creating a plan of action to operationalize the Protocol. The Buenos Aires Plan of Action set deadlines for resolving issues like financial mechanisms and developing country participation, further elaborating the detailed rules of the Kyoto Protocol.

COP7 – Marrakech, Morocco (2001)

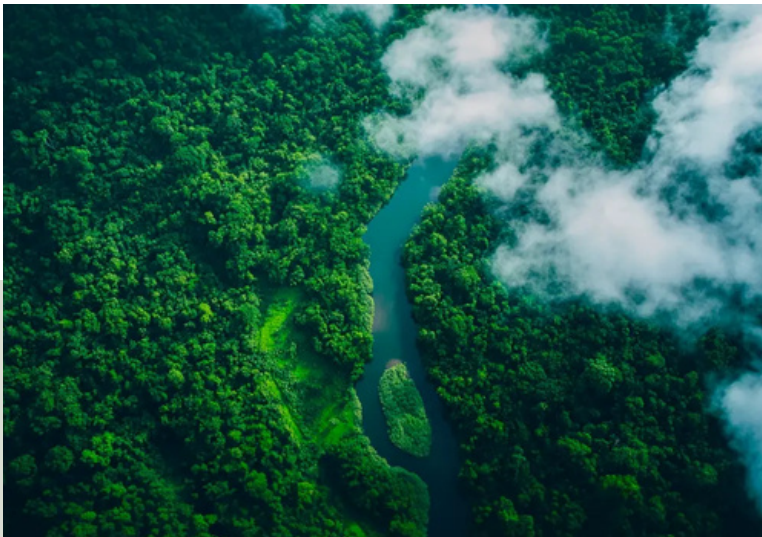

COP 7 resulted in the Marrakech Accords, which detailed the rules for implementing the Kyoto Protocol. It provided clarity on emissions accounting, reporting, and compliance, thereby enabling ratification and strengthening the international community's resolve to combat climate change through actionable commitments.

COP 15 – Copenhagen, Denmark (2009)

Despite high expectations, COP 15 concluded with a non-binding Copenhagen Accord. The conference recognized the need to limit global warming to 2 degrees Celsius above pre-industrial levels, establishing a political acknowledgment of the climate crisis but failing to secure a global legal agreement.

COP 16 – Cancún, Mexico (2010)

COP 16 restored faith in the international process after Copenhagen, culminating in the Cancún Agreements. These accords formalized mitigation pledges and enhanced transparency, fostering technology transfer and establishing the Green Climate Fund to support climate action in developing nations.

COP 17 – Durban, South Africa (2011)

COP 17 was a pivotal moment in climate action, launching the Green Climate Fund (GCF) to support developing countries and advancing negotiations for a global emissions reduction agreement. It fostered international cooperation by securing commitments from major economies to cut emissions and ensuring financial aid for vulnerable nations.

COP 18 – Doha, Qatar (2012)

DOHA 2012
COP18-CMP8

COP 18 extended the Kyoto Protocol to 2020 with new emission reduction targets for developed nations and laid the groundwork for a universal climate agreement by 2015. It also emphasized support for developing countries and introduced mechanisms to address "loss and damage," advancing global cooperation and climate action.

COP 21 – Paris, France (2015)

COP 21 was a landmark in global climate action, with 195 nations adopting the Paris Agreement to limit global warming to 1.5–2°C above pre-industrial levels. It established binding frameworks for countries to set and enhance climate goals through NDCs, while supporting developing nations, marking a historic step toward a sustainable, low-carbon future.

COP 26 – Glasgow, UK (2021)

COP 26 was a pivotal milestone in climate action, featuring the Glasgow Climate Pact's commitments to phase down coal and end fossil fuel subsidies. With over 100 nations pledging to halt deforestation by 2030, 151 countries updating climate goals, and finalizing the Paris Agreement Rulebook, the conference advanced accountability and emphasized the urgency of limiting warming to 1.5°C.

COP 27 – Sharm el-Sheikh, Egypt (2022)

COP 27 was a landmark in climate diplomacy, establishing the Loss and Damage Fund to support vulnerable nations and securing a \$230 million pledge to the Adaptation Fund for resilience-building. It highlighted youth leadership, nature-based solutions, and standardized greenhouse gas metrics, advancing climate justice and accelerating global climate action.

COP 28 – Dubai, UAE (2023)

COP 28 was a critical milestone in climate action, establishing a Loss and Damage Fund, conducting a global stock-take of the Paris Agreement, and advancing renewable energy initiatives. With over \$85 billion mobilized, pledges to halt deforestation by 2030, and targets to cut methane emissions and double energy efficiency, the conference underscored the urgency of limiting warming to 1.5°C for a sustainable future.

COP 29 – Baku, Azerbaijan (2024)

COP 29 was a landmark in climate action, with agreements to triple climate finance for developing nations to \$300 billion annually by 2035 and target \$1.3 trillion per year by the same timeframe. The conference finalized international carbon market rules under Article 6 of the Paris Agreement and launched the Baku Dialogue on Water for Climate Action, advancing finance, equity, and global collaboration on climate issues.
